*Example $DUTY line in log file:*

**1741301926,694,$DUTY,67CA286703E867CA28A303E43000000300DBBA00*7A**

After '$DUTY', **characters 1-8 (n=8) = UTC start datetime (in Unix epoch)**
**67CA2867** (hexadecimal)
= **1741301863** (decimal) seconds in Unix epoch = **2025-03-06 02:44:23 UTC** start datetime

After '$DUTY', **characters 9-12 (n=4) = milliseconds after UTC start date-time (in Unix epoch)**
**03E8** (hexadecimal)
= **1000** (decimal) milliseconds = **2025-03-06 02:44:24.000 UTC** precise start datetime

After '$DUTY', **characters 13-20 (n=8)** = **UTC end datetime (in Unix epoch)**
**67CA28A3** (hexadecimal)
= **1741301923** (decimal) seconds in Unix epoch = **2025-03-06 02:45:23 UTC** end datetime

After '$DUTY', **characters 21-24 (n=4) = milliseconds after UTC end date-time (in Unix epoch)**
**03E4** (hexadecimal)
= **996** (decimal) milliseconds = **2025-03-06 02:45:23.996 UTC** precise end datetime

After '$DUTY', **character 25 (n=1)** = **hydrophone ID number**
**3** (numeric ID - does not require decoding)
= high-frequency hydrophone ***key:** 2 = low-frequency hydrophone, 1 = mid-frequency hydrophone*

After '$DUTY', **characters 26-33 (n=8)** = **sequential recording session number *hydrophone-specific***
**00000030** (hexadecimal)
= **48** (decimal) = **48th** audio segment to be recorded *by high-frequency hydrophone* during this mission

After '$DUTY', **characters 34-41 (n=8)** = **n samples recorded during session**
**00DBBA00** (hexadecimal)
= **14400000** (decimal) = **14,400,000** samples recorded in audio segment
